

Clone Expert for Jira

*STANDARDIZE REPEATABLE WORK.
CLONE SMARTER. LAUNCH FASTER.*

Clone Expert helps teams turn repeatable processes into ready-to-run Jira work structures.

It supports both template-based workflows and universal issue cloning, giving teams a faster and more controlled way to launch recurring work.

Universal work item cloning

Clone:

- a single work item,
- any selected set of work items (bulk clone),
- work items together with child items, based on any hierarchy configured in Jira.

Repeatable process support

Standardize the execution of recurring work using templates built with native Jira functionality.

Clone Expert for Jira

WHAT MAKES CLONE EXPERT DIFFERENT

Preview and edit before cloning

Review the full target scope in a central preview table and adjust work items before they are created.

Single-item and field bulk editing

Update specific fields or apply changes across entire columns using advanced bulk edit options.

Intelligent schedule planning

Adjust the full timeline to a new start date or deadline while preserving the template schedule.

Dynamic template personalization

Detect user-defined placeholders like {{ClientName}} or {{ReleaseVersion}} and replace them during cloning.

Assets cloning support

Clone Assets linked to work items and adjust them before creating the final structure.

WHERE CLONE EXPERT FITS BEST

Clone Expert is especially useful when teams need to launch similar work repeatedly, while keeping execution structured and consistent across projects, departments, or clients.

TYPICAL SCENARIOS

- preparing multiple teams for audits, where each team must complete the same set of assessments or remediation steps,
- rolling out new security standards across modules, teams, or projects,
- running events according to a repeatable delivery model,
- executing marketing campaigns,
- managing releases,
- standardizing change management processes,
- supporting hiring, onboarding, and offboarding in HR,
- implementing tools or service setups for new clients.
